

Hi Cap Flex Billing Option

A problem many customers face today is the need for occasional, temporary increases in bandwidth. They want the maximum bandwidth available on their circuits instantly, but don't want to pay for any unused bandwidth.

Now available with MIS, PNT, EaMIS and EaPNT, the Hi Cap Flex billing option offers you a solution! The Hi Cap Flex billing option provides a dedicated access circuit with billing based on actual bandwidth usage. You can select a "Minimum Bandwidth Commitment" and then pay an "Incremental Usage Fee" for usage above the minimum commitment.

You now have an opportunity to choose the billing option that is best for your business! Hi Cap flex is a complementary offer to our current Flat Rate Billing because it offers an alternative option to fixed monthly fees and a capped maximum bandwidth.

Benefits

- Flexibility for occasional, temporary increases in bandwidth needs
- Available with ACC Business MIS, EaMIS circuits and PNT, EaPNT networks
