PNT (Private Network Transport)

Just The Facts

Performance

- Maximizes performance of both Internet and private networking needs by merging them over one cost effective network.
- IP based platform provides fully meshed networking using only a single connection at each site.
- Available Class Of Service (COS) to prioritize traffic for supporting voice over IP, video and other time-sensitive applications.
- Sites can have Included Managed CPE (Customer Premises Equipment), Customer Provided and Managed CPE, or a combination of both within a single PNT VPN.
- By adding Managed Internet Service to a single PNT location, customers can enable their entire PNT network with Internet access.

Security

Network-based VPN eliminates the need for customers to buy, manage, or maintain their own VPN equipment.

- Provides security equivalent to Frame Relay or ATM on an IP network.
- MPLS technology (RFC 2547) labels and secures every packet without the need for IPSEC or tunneling.
- Exclusively utilizes AT&T's fully owned and operated Tier 1 IP backbone.
- All backbone nodes are in physically secured facilities managed by AT&T.

Reliability

World's most experienced network services provider for over 120 years.

- 24×7 Proactive Network Management, Monitoring, and Maintenance.
- IP backbone designed with Layer 3 multiple 'rings' to provide high reliability and re-routing paths, with no single point of failure in core architecture.
- Our network consistently meets and exceeds targets of:
  - > 99.95% reliability
  - < 0.05% roundtrip packet loss

ACC Business Private Network Transport (PNT) gives you a network-based, fully meshed IP Virtual Private Network (VPN) with any-to-any connectivity using just a single connection at each site.

PNT utilizes Multi Protocol Label Switching (MPLS) technology to provide security, performance, and reliability. By adding optional Class Of Service (COS) capability, you can also have traffic prioritization to support Voice over IP, video, and other time-sensitive applications to meet your demanding networking needs.

We do all of this by delivering our services on the AT&T Global Network, one of the largest, most sophisticated communications networks in the world and backed by the research and development capabilities of AT&T Labs. Combined with dedicated customer service that ACC Business is known for, you get the simply best value for your investment.
