■ **RELIABLE**

Proactive internet network monitoring to reduce downtime and 24/7 customer support backed by local Charter Business technicians.*

WHAT IT IS

Along with having a network comes the cost of keeping it secure and reliable. Third-party IT management services are expensive, and they're not always there when you need them. And dedicating your own internal resources to managing your network is expensive and impractical. That's why Charter Business now offers a better solution.

When you subscribe to Charter Business Internet Plus, the addition of Charter Business Managed Internet Router gives you a network router, network monitoring, router management, and enhanced support for one low monthly price.

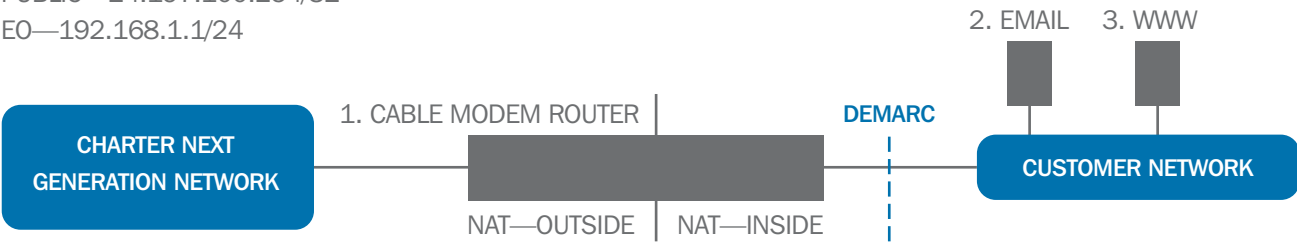

HOW IT WORKS

In most configurations, Charter Business manages your internet connection and network router. Your network is configured to allow users to access the internet, email, and other services through one shared static IP address. If you have additional needs, such as multiple IP addresses or routers, we will work to customize the right solution for you.

Charter Business Managed Internet Router service also supports businesses that manage and configure their own router (behind the Charter Business managed router), and may need more than one static IP address.
