Lightyear Point-to-Point

DS-3

More power and more speed. If you were to bundle more than 670 DS-0 circuits, each with a data transmission capacity of 64 kbps, then you get an idea of the impressive power of Lightyear's DS-3 point-to-point digital private-line service. DS-3 is the premium path for large-capacity, high-speed data transfer.

Fully compatible with Bellcore and other industry standards, Lightyear's DS-3 digital data line harnesses power equivalent to 28 DS-1 (1.544 mbps) circuits. This enables high-end users to transmit at blazing speeds approaching 45 megabits per second! In addition to high-speed digital transfer and access, DS-3 dedicated network service maintains near-perfect results, with accessibility and error-free seconds surpassing 99.9%. DS-3 clients enjoy the fastest, cleanest and most efficient transmission of compressed video, bulk voice and virtually all data communication your company demands.

DS-1

Lightyear's DS-1 service is a high-capacity, point-to-point digital private-line service designed for full-duplex, isochronous transmission of digital signals.

Lightyear's DS-1 digital data line provides power equivalent to 24 DS-0 (64 kbps) circuits, which enables you to transmit at speeds up to 1.544 megabits per second! Fully compatible with Bellcore and other industry standards, DS-1 dedicated network service maintains near-perfect results, with accessibility and error-free seconds surpassing 99.9%. The result is a faster, cleaner and measurably more efficient transmission of your compressed video, bulk voice and virtually all data communication your company requires.
