

inCONTROL Voice VPN

Customer-Controlled
Intelligent Networks

*High Quality Voice VPN
with Global Reach
at Tremendous Savings*

Excellent Quality: MASERGY's inCONTROL Voice VPN service provides toll-grade IP anywhere in the world, and offers significant savings through a converged network solution.

inCONTROL Voice VPN Provides:

- Voice Grade IP
 - Toll quality voice (MOS 4.0)
 - Voice-grade IP SLA's
 - Support for migration and/or convergence
- Voice VPN features
 - Customer controlled via web interface - "Service Control Center"
 - Custom public and private dialing plans - provides global n-digit dialing
 - Call detail reports via web-hourly updates
- Wide range of calling options
 - On-net calls to-and-from MASERGY connected voice sites
 - Off-net PSTN termination of intrastate, interstate, and international calls
 - Simplified low-cost call rating-call destination determines the rate independent of worldwide originating location
- In-bound toll free support available

inCONTROL Voice VPN: Many enterprises are looking for a cost-effective solution for migration to IP Telephony without the risk of running mission critical voice over the best effort public Internet. This product delivers voice-grade IP transport with consistently excellent voice quality and cost effectiveness you anticipate from utilizing Voice over IP technology. MASERGY's inCONTROL Voice VPN also provides a robust set of features for ease of use, control, and management of a complex global voice service. Start getting immediate cost savings of your company's voice calls today, while building a foundation for significant savings in the future by converging voice, data, and video as your business is ready.

Voice-Grade Service Level Agreement (SLA's) include:

- 100% packet delivery
- Guaranteed in-sequence packet delivery
- 5ms maximum latency variation ("jitter")
- Sub 1 second fast failover - network recovery
