

Customer-Controlled Intelligent Networks

*Upgrade Your IP Traffic for
Improved Application Performance*

Customer Controlled Networking

Public IP: Now you can experience the management and cost advantages of a fully-meshed IP network while ensuring the performance of your software across your wide area network. MASERGY's Public IP helps you improve application performance by prioritizing business applications in a scalable, easy-to-manage network environment. Since Public IP is part of MASERGY Intelligent Transport service, you can combine this product with any other transport option (including VPLS or Private IP), add a voice and video service within minutes, and integrate the service with your existing network to create a seamless migration path away from Frame Relay and other legacy technology. Public IP is delivered through Ethernet handoffs to simplify integration with your local area network. Best of all, you can control your network using MASERGY's award-winning Service Control Center to make dozens of changes anytime, day or night, through a web-based service portal.

Prioritized Traffic: MASERGY's Public IP is an MPLS-based Layer 3 service that lets you prioritize critical business applications above less important network traffic.

Features of Public IP include:

- Up to five levels of prioritization
- End-to-end QoS on a MPLS backbone
- Internet access
- Dedicated installation engineer
- 24x7 proactive service monitoring
- Industry leading SLA's

Benefits of Public IP include:

- Consistent performance for business applications
- Built in denial of service attack resistance
- Support for normal data, priority data, critical data, voice, and video
- Flexible and cost effective pricing plans

Voice and Video, Service Level Agreement (SLA's) include:

- 100% packet delivery
- Guaranteed in-sequence packet delivery
- 5ms maximum latency variation ("jitter")
- Sub 1 second fast failover - network recovery
