

# Sprint Voice Bundles

A suite of voice communications solutions for local and long distance that's flexible, cost efficient and part of our popular Sprint Complete Access<sup>SM</sup>

We've added local business lines, digital PBX trunks and ISDN PRI to our economic long distance services. With Sprint Voice Bundles, you can receive a complete, yet flexible suite of reliable voice communications. And you receive a single long distance and local voice solution from one source on one bill.

## Use more, pay less

With Sprint Voice Bundles, the inclusion of local calling services means significant discounts on long distance rates. And because Sprint can provide your essential voice communications needs, you'll streamline technical and administrative expenses normally associated with the time and effort required to integrate unbundled solutions from myriad vendors.

## Easily select a perfect voice package

In addition to reliable long distance calling plans, Sprint Voice Bundles allows you to select among three distinct local voice services to meet current and future business communications needs. Whether you require

simple business lines with optional features or the added functionality and versatility provided with digital services, Sprint can deliver a reliable solution.

## Services

**Local.** Unlimited local calling is just the beginning. With Sprint Voice Bundles, you choose from three local exchange services: business lines, digital private branch exchange (PBX) trunks and Integrated Services Digital Network Primary Rate Interface (ISDN PRI).

**Business lines.** Often referred to as plain old telephone service (POTS), this basic, two-way connection for telephones, key systems, fax machines or modems can handle inbound and outbound calls. Choose single or multi-line (hunting) configurations and select from a comprehensive menu of calling features to meet the growing needs of your business.

**Digital PBX trunks.** If you have a digital PBX system, Sprint can provide digital connectivity from your premises to the public network. Each digital trunk is the equivalent of 24 voice channels, delivered on

a T1 (1.544 Mbps), for local and long distance services. As an option, your PBX trunks can be configured with inbound or two-way direct inward dialing. Direct inward dialing (DID) eliminates the need for an operator, reduces the potential for blockages and speeds up connections.

**ISDN PRI.** Like trunks, ISDN PRI can provide you with a flexible, reliable, high-capacity connection to the public network. Local and long distance calling is provided over the same T1 connection, each channel providing up to 64 Kbps of bandwidth. You receive clear digital transmission, faster call set-up times and trunking efficiencies — all at lower costs than comparable analog services. And, you can enhance your key system or PBX with sophisticated services such as dynamic channel allocation, network ring again and calling number identification. DID is also a specific option with ISDN PRI.

**Long distance.** Sprint Voice Solutions<sup>SM</sup>, our long distance calling plan, joins our local calling services to form Sprint Voice Bundles. This means you can receive significant discounts on long distance calling rates. Benefits can include lower domestic voice

rates; scalability that can reward business growth; and flexibility through annual minimum commitments.

**Wireless.** With Sprint PCS and Sprint PCS Vision<sup>SM</sup> services, you can keep mobile employees in the loop and up-to-speed the wireless way. Using a variety of mobile devices, they'll be able to access the corporate intranet at speeds of up to 144 Kbps, check and respond to company e-mails, access company directories and work calendars, send and receive instant messages, and capture, store and send high-resolution images.

**Installation.** Your installation activities, like site power, cabling to the punch-down block and demarc extensions, are typically

included. Sprint will complete most inside wiring extensions from the minimum point of entry in your building to the equipment room in your office suite.

## Optional services

**Calling features.** From caller ID to call rejection, Sprint provides a full suite of calling features that can make your local phone service a powerful tool for your business.

**Voice mail.** Transform your phone into a professional answering service by answering and recording calls 24 x 7 with the clarity of digital recording technology.

**Wire maintenance.\*** This service includes diagnosis of any inside wiring problems and necessary repairs.

## Why Sprint?

Sprint and Nextel have come together, offering you more choice and flexibility. This powerful combination brings you access to more products, more services and more of what you need — to do more of what you want. Welcome to a future full of possibility.

We are the new Sprint, and yes you can.
