Fax to Email

Fax to Email is a unified messaging tool created to enhance the way businesses receive inbound faxes. From the privacy of their desktops, your employees will be able to receive inbound faxes conveniently in their email account. Plus, Fax to Email reduces the costs associated with maintaining a fax machine such as paper and toner. Your employees will spend less time walking to and from the fax machine and instead have more time to serve your clients.

For businesses in the legal, financial, and medical industries, Fax to Email ensures that critical information received in a fax will remain confidential. With growing concern about public access to personal information in all fields, your business will be able to better serve your clients, customers, or patients with the knowledge that important faxes will safely arrive in the right hands!

Features

- **Improves Customer Service:** Your business will be able to serve your customers more effectively and securely, with information readily available on the computer.

- **Reliability:** Faxes are received directly in your email account without any hassles.

- **Cost Savings:** This product will enhance the way your business receives inbound faxes while reducing costs associated with a fax machine.

- **Security:** This is a safer way to receive inbound faxes and maintain confidentiality with customers, clients, or patients.

- **Organization:** Your business will have a documented paper trail of all received faxes organized conveniently in your email inbox.

- **Accessibility:** If your business has email access outside of the workplace, your employees can easily receive inbound faxes offsite.
