Managed Network Security

Windstream Managed Network Security unifies stand-alone security services, such as anti-virus protection, firewall and intrusion prevention and detection into one robust solution.

Managed Network Security goes beyond protecting PC desktops. It defends your entire office computing environment against the latest generation of Internet threats.

Windstream provides security without the hassle. We set it up, maintain it and manage it for you.

Protect Your Entire Network

- Application servers
- Desktop PCs
- Wireless LAN
- Network printers

To learn more about how your business can benefit from Managed Network Security, contact your local Windstream Representative.

Features

- Firewall with customizable rules
- Application intelligence detects and prevents malicious traffic from gaining network access
- Protection against viruses, worms, and phishing attacks
- Security log storage and weekly reports
- IPSec encrypted, site-to-site VPN connections
- Allows users to securely connect to your network from the Internet
- Secure 802.11b/g network wireless access
- Web content filtering protects employees from objectionable web content

Advantages

- Enjoy comprehensive, real-time protection against a variety of Internet attacks
- Keep your business in compliance with regulatory standards for security
- Reduce costs of dedicated IT staff or in-house security experts since Managed Network Security is fully managed by Windstream.
