

Online Data Backup

The majority of corporate data originates with PC users—often on laptops or home computers outside the firewall. Computer viruses, laptop thefts, equipment failure, and even simple user mistakes threaten your company's mission-critical data.

Online Data Backup reduces the costs and risks associated with compliance, litigation, and disaster recovery by automatically protecting data using one simple plan.

Developed with Iron Mountain Digital, the undisputed leader in automatic desktop and laptop data protection and reliable data recovery, Online Data Backup virtually eliminates the risk of PC data loss by automatically backing up desktop and laptop computers as users go about their usual tasks.

Contact your Windstream Representative to learn more about how your company can begin protecting employee mission critical data using Online Data Backup.

Features

- **Backup:** Rapid and unobtrusive backup of PC data is automatic.
- **Recovery:** Data recovery is typically managed with a few mouse clicks.
- **MyRoam:** Users can easily access backed-up data through a secure Internet connection using any PC with a working web browser.
- **Secure Data Transmission:** The highest levels of digital security are available by encrypting data at the desktop as well as during transmission and storage.
- **Unsurpassed Data Center Security:** Iron Mountain operates secure, mirrored Data Center facilities—with DataStorePC, downtime is not an option.

Advantages

- Automatically backs up PC data without disturbing users.
- Allows for reliable and easy data restoration.
- Ends the possibility of data loss from viruses, lost or stolen laptops, data corruption, and simple mistakes.
- Centralizes an unlimited number of PC backup accounts, controlling deployment, backup timing, file selection, and user access.
- Provides your company control of secure backup and restoration both inside and beyond the company firewall under one, simple plan.
