VoIP and Data Bundle

PRI and Trunk Service

Windstream's VoIP and Data Bundle—PRI and Trunk service is designed for the sophisticated customer who has an on-site PBX capable of delivering all of the calling features necessary for managing a successful business. With this solution, customers can allocate the 23B+D signaling to suit almost any business need.

Windstream's VoIP and Data Bundle couples innovation with proven, reliable technology.

To learn more about how your business can benefit from the ease and flexibility of the VoIP and Data Bundle, contact your local Windstream Representative.

Features

- **Flexibility:** Allows businesses to combine voice, Internet, and networking services.

- **Dual Usage:** Share bandwidth allocation between data and voice.

- **Voice Prioritization:** Inbound and outbound calls receive the highest priority.

- **Robust Feature Packages:** Customers can select from feature packages that include free domestic LD, audio conferencing, messaging services, web hosting, email, managed Internet security, and much more.

Advantages

- **Future-Proof Your Network:** Works with the most current hardware technology, while providing the foundation to upgrade to more advanced systems at any time.

- **Free Calling Between Locations:** Customers receive free domestic LD between VoIP and Data locations.

- **Quality of service:** Windstream leverages its state-of-the-art, fully redundant MPLS Network to ensure the highest quality of service.
