

# XO™ CORPORATE DIGITAL SUBSCRIBER LINE (DSL)

*Always-On Access to Your Corporate LAN and the Internet*

XO INTERNET ACCESS

Always-on, T-1-like speeds, flat-rate monthly charges\*, no toll-free access number or modem pools are necessary, unlimited usage and throughput and 24 x 7 technical support are all standard features with XO™ Corporate DSL.

## With Corporate DSL, you can:

- Ensure that your large, remote branch offices and workforce have full-power communications with greater than T1-like, always-on access to your corporate LAN and the Internet;
- Free up your IS Team for higher-level communications planning and strategizing by relieving them of daily provisioning hassles, modem pool headaches, and dial-up delays;
- Accelerate communications on your corporate LAN—up to 50 times faster than dial-up and up to 12 times faster than ISDN;
- Grow your business and easily upgrade to a higher speed as your users' bandwidth needs change; and
- Stay competitive by expanding your company's capabilities for sending and receiving large files, such as graphics, audio, and video.

## Corporate DSL:

- Provides speeds up to 2.3 Mbps for a fraction of the cost;
- Offers complete solutions that include circuit and equipment ordering, installation, customer support, and billing;
- Features one contact, one invoice, itemized billing; and
- Grows as your business grows with upgradeable speeds and services.

Now you can provide your company the advantages of high-performance network communications. With Corporate DSL, end-to-end IP connectivity is established and maintained between your corporate network and your remote locations—each of which are connected to the ATM backbone via DSL circuits. For enhanced performance, you can connect your network to the backbone via a dedicated circuit, such as T1, T3, or high-speed DSL. Alternately, you may also use an existing corporate Internet connection.

## It's Simple and Convenient.

Corporate DSL is easy to start using because XO™ handles the provisioning, installation, and maintenance. It's easy to manage because there are no remote access servers, and all DSL services are backed by personalized 24-hour helpdesk to helpdesk technical support. And it's easy to count on because XO has a private, nationwide ATM backbone. With self-healing SONET metro fiber rings and an interwoven SuperPOP network architecture—XO offers a remote LAN access solution in a routed environment with either static or dynamic IP addresses (DHCP). Our router-based DHCP support is convenient because no computer reconfiguration is needed when moving between office and home or other locations. That means fewer calls to your IS Help Desk.

## Individual Package Features

Because Corporate DSL offers scalable solutions that can support a vast number of remote users, it's ideal for companies supporting a large, remote workforce.

- SDSL or IDSL circuit
  - Speeds: 144 Kbps to 2.3 Mbps
- Efficient Network 5800 Series Router
  - 8 Static IP Addresses (Additional available upon request)
- Routed Environment

\* Flat-rate prices vary by location. Limits apply.
