XO™ INBOUND PRI

Providing reliable connections to organizations that offer Internet access to end-users

XO INTERNET ACCESS

Multiple rate center connectivity, all digital circuit and DID numbers per rate center are all standard features with XO Inbound PRI.

With Inbound PRI, you can:
- Subscribe to PRI service across multiple rate centers;
- Serve end-users with local Internet access from one physical location, resulting in lower operating costs; and
- Deliver reliable connections to the end user through digital circuits.

Inbound PRI:
- Qualifies for XO™ volume discounts;
- Is backed by 24 x 7 monitoring and proactive management;
- Provides scalable solutions and can grow with your business; and
- Offers more choices and access points than private carriers can deliver.

Inbound PRI enables customers to provide their end-users with a 100% digital circuit that delivers reliable connections and fast communications through the Internet gateway. This service reduces the risk of access bottlenecks. With the XO unique network architecture, customers are able to subscribe across multiple rate centers on a single PRI and reduce operating costs.

Multiple Rate Center Connectivity
- Allows for the subscription of up to five (5) Local Rate Centers per DS-1
- Provides cost savings and flexibility within the network

All Digital Circuit
- Service is delivered on an all-digital basis only
- Conversion from a digital to analog signal using customer-provided channel banks is optional

DID Numbers per Rate Center
- One DID is provided per Inbound PRI customer
- Additional blocks of 20 DIDs can be provided for an additional fee
