Integrated Access + XO™ Virtual Private Network (VPN) Services

Integrated packages with the option to add VPN at a discount   XO INTEGRATED SERVICES

Integrated Access offers one stop communications solutions for customers with critical Internet and data applications – combining Internet with Local and Long Distance Service. Add XO™ VPN for secure, cost-effective private communications over the public infrastructure, and businesses of all sizes can take advantage of one provider.

XO™ VPN is a managed service that delivers secure enterprise-scale connectivity over a shared public infrastructure without sacrificing any of the benefits of a private network. The offer, based on the highly regarded Cisco® platform, is now available with a pricing discount when purchased with any of the Integrated Access packages.

With XO™ VPN, you can:
- Establish a nationwide, less expensive alternative to a private network, without sacrificing security, access methods or connection speed;
- Connect all your locations into a wide area network or private Intranet for secure and private transmission of all your data;
- Streamline remote access to individual users; and
- Scale your bandwidth and connectivity as your business grows.

VPN Features
Whether you have many sites that trade significant data, or just a few that transmit information irregularly, XO™ can design the VPN solution that is right for you. With remote dial-up and dedicated access connections available from 56 Kbps to 768Kbps, your VPN will fit the size of your business today and grow with you for tomorrow.

Businesses that succeed in today's economy are those that leverage technology, not just to improve communications, but also to save time and money. XO™ understands your business-critical need for secure communication between sites and with your remote users.

XO VPN is a managed service that allows you to focus on your core business competencies. The installation, configuration and ongoing management of the Cisco® CPE is all included for the price of the XO VPN. By adding VPN to Integrated Access

service, businesses of all sizes can take advantage of one provider for Local, Long Distance, Internet access and VPN -- all at a great price. The XO VPN product can even be combined with additional firewall capabilities all on a single, feature rich appliance.

With Integrated Access, you can:
- Reduce telecom costs by combining local voice, long distance and dedicated Internet access on a single facility;
- Benefit from single-source accountability for all of your voice, long distance and Internet access services;
- Eliminate self-administered installation, maintenance, and support hassles; and
- Enjoy the convenience of one-invoice billing for all of your XO™ services*. Note that when users of XO™ VPN add remote dial access to their VPN service, they will receive two invoices for XO VPN, specifically for:
  1. Dedicated usage (DIA or DSL) & all other standard features are billed in advance and appear on a customer's regular invoice for the active month of connectivity.
  2. Remote Access features for VPN are billed in arrears at the end of the month of service, and are presented on a separate invoice.

Integrated Access:
- Features strict Service Level Agreements (SLAs) on Internet Access services;
- Include pre-configured CPE, installation, and on-going maintenance for life of service contract.

Comprehensive Integrated Access Features
Integrated Access combines voice, long distance, and Internet access on a single facility to provide a new level of speed, reliability and affordability.
